Dear Lacerne Dixon;

As a registered nurse and enterostomal therapist, I am involved in the prevention and treatment of skin integrity. Problems I frequently see include macerated skin due to fecal and urinary incontinence. I use Calomoseptine ointment to heal red, tender and weeping skin. I find it to be an excellent product. In three to five days after applying Calomoseptine, dramatic results are documented. I recommend its use with confidence to physicians and nurses alike for soothing and healing red, raw skin. Your product has made my job of preserving skin integrity a pleasurable one. Thank you for such a fine product.

Sincerely yours,

*Janet [redacted] RN ET*
