Facility: Hospital Home Health Care Agency of California
Patient Code: *[Redacted]*
Date of Case Study: 4/12/89 - 4/26/89
Age: 85 Sex: Female
Diagnosis: Excoriated skin on coccyx and perianal area due to fecal and urinary incontinence

The patient is an 85 year old female seen in her home. The patient has continuous fecal and urinary incontinence. Her age and lack of appropriate hygiene are the contributing factors to the excoriated skin on her coccyx and perianal area.

She had developed a severe, painful excoriation measuring 15cm X 7cm on her buttock continuing between her legs. Patient is wearing disposable diapers. Good hygiene was demonstrated and Calmoseptine was applied daily after a sitz bath.

After three days patient was pleased for the relief from pain and burning that she meticulously continued the treatment daily and after 12 days her skin was completely healed. Patient is continuing using Calmoseptine daily as prevention of further skin damage.
