---

Because she only has her small intestine, she has more frequent bowel movements, 6-10 per day. We have tried every diaper and non-diaper rash cream, ointment and powder on the market; we have tried different brands of diapers and always buy them a size to big, but nothing helps. Hannah suffers daily with a swollen, red and bleeding bottom.

At our last visit with Dr. [REDACTED] March 16, 1999, she gave me a sample of your product. What a MIRACLE. This stuff has done what a prescription could not do. The redness is now pink, the swelling has gone down and there is hardly no bleeding. All that in 24 hours.

I am writing this letter to thank you for saving Hannah's delicate skin and for saving my mind.

We just recently found out that we are expecting again. There is a 3-5% chance that this could happen again and a greater chance, 12%, if our next child is a girl. There is no cure and, in fact, the doctors don't even know what causes this disease.

At least we know that your product is available, just in case, but we pray every day that we won't need it again.

Again, thank you for Calmoseptine.

Sincerely,

  
Victoria M.
