Dear Wendy:

We had been using your product for patients who has irritated, denuded skin due to incontinence and other rashes. However, we are surprised that we experiment it in putting it to a Stage II wound ulcer that is clean and after 2 weeks it healed.

Moreover, this Stage II wound ulcer is located in the penile area and I know that a dressing is impossible to apply due to the location. But with your product it is cost-effective and convenient to apply.

I really recommend your product to the staff nurses and physicians. And also, I included it in my Skin Care Protocol.

I would like to suggest for a clinical study in order to support your product scientifically. And thank you for the samples you've sent.

Respectfully yours,

ROMEL L. BARRA, RN  
Wound Care Nurse
